INOX

## Productos de acero inoxidable / Stainless steel products / Produits en acier inoxydable

El acero inoxidable es un tipo de acero resistente a la corrosión, dado que el cromo que contiene posee gran afinidad por el oxígeno y reacciona con él formando una capa pasiva de aproximadamente un átomo de grosor, evitando así la corrosión del hierro. Sin embargo, esta capa puede ser afectada por algunos ácidos, dando lugar a que el hierro sea atacado y oxidado por mecanismos intergranulares o picaduras generalizadas.

El acero inoxidable que nosotros normalmente usamos para nuestros productos es el tipo AISI 304, AISI 316 y AISI 316L con un acabado satinado o brillante. Este tipo de acabado garantiza una actuación excelente por lo que se refiere a la durabilidad, fuerza, además de su fácil limpieza.

Sobre el acero inoxidable pueden aparecer pequeñas manchas como resultado del contacto con la atmósfera marina, ambientes húmedos, así como la cal proveniente de los riegos. Este tipo de contaminación sobre el acero inoxidable se eliminará con la aplicación de productos limpiadores que contengan ácido fosfórico.

Stainless steel is a type of steel resistant to corrosion, since the chromium it contains has a great affinity for oxygen and reacts with it to form a passive layer approximately one atom thick, thus preventing the corrosion of iron. However, this layer can be affected by some acids, leading to the iron being attacked and oxidized by intergranular mechanisms or generalized pitting.

The stainless steel that we normally use for our products is AISI 304, AISI 316 and AISI 316L with a satin or bright finish. This type of finish guarantees excellent performance in terms of durability, strength, as well as easy cleaning.

Small stains may appear on stainless steel as a result of contact with the marine atmosphere, humid environments, as well as lime from irrigation. This type of contamination on stainless steel will be eliminated with the application of cleaning products that contain phosphoric acid.

L'acier inoxydable est un type d'acier résistant à la corrosion, car le chrome qu'il contient a une grande affinité pour l'oxygène et réagit avec lui pour former une couche passive d'environ un atome d'épaisseur, empêchant ainsi la corrosion du fer. Cependant, cette couche peut être affectée par certains acides, conduisant à l'attaque et à l'oxydation du fer par des mécanismes intergranulaires ou des piqûres généralisées. L'acier inoxydable que nous utilisons normalement pour nos produits est l'AISI 304, l'AISI 316 et l'AISI 316L avec une finition satinée ou brillante. Ce type de finition garantit d'excellentes performances en termes de durabilité, de résistance, ainsi qu'un nettoyage facile.

De petites taches peuvent apparaître sur l'inox dû fait du contact avec l'atmosphère marine, les milieux humides, ainsi que le calcaire d'irrigation. Ce type de contamination sur l'acier inoxydable sera éliminé avec l'application de produits de nettoyage contenant de l'acide phosphorique.

ALU

## Productos en aluminio / Aluminium products / Produits en aluminium

El aluminio es un elemento químico, de símbolo Al y número atómico 13. Se trata de un metal no ferroso. Es el tercer elemento más común encontrado en la corteza terrestre. Los compuestos de aluminio forman el 8% de la corteza de la tierra y se encuentran presentes en la mayoría de las rocas, de la vegetación y de los animales. En estado natural se encuentra en muchos silicatos (feldespatos, plagioclasas y micas). Como metal se extrae del mineral conocido con el nombre de bauxita, por transformación primero en alumina mediante el proceso Bayer y a continuación en aluminio mediante electrolisis.

Nuestros artículos han sido protegidos con cromatización y acabados con pinturas de poliéster y su deterioro puede producirse por:

- Contacto continuado con aguas de alto porcentaje de sal o aguas ácidas contaminadas por abonos o insecticidas.
- La electrolisis producida por el contacto del aluminio con los tornillos de sujeción si son de acero (se aconsejan de acero inoxidable).
- La corriente vagante existente en el terreno, únicamente evitable con una correcta toma-tierra.
- La no protección rápida del aluminio en el caso de verse arrancada la pintura por roce o golpe.

Aluminum is a chemical element, with the symbol Al and atomic number 13. It is a non-ferrous metal. It is the third most common element found in the earth's cortex. Aluminum compounds make up 8% of the earth's cortex and they are present in most rocks, vegetation, and animals. In its natural state it is found in many silicates (feldspars, plagioclase and micas). As a metal, it is extracted from the mineral known as bauxite, by transformation first into alumina through the Bayer process and then into aluminum through electrolysis.

Our articles have been protected with chromatinization and finished with polyester paints and their deterioration can be caused by:

- Continuous contact with waters with a high percentage of salt or acid waters contaminated by fertilizers or insecticides.
- The electrolysis produced by the contact of the aluminum with the fixing screws if they are made of steel (stainless steel is recommended).
- The existing wandering current in the land, avoidable only with a correct grounding.
- The non-rapid protection of the aluminum in the event of the paint being torn off by rubbing or hitting.

Nos articles ont été protégés par chromatisation et finis avec des peintures polyester et leur détérioration peut être à cause de :

- Contact continu avec des eaux avec un pourcentage élevé d'eaux salées ou acides contaminées par des engrais ou des insecticides.
- L'électrolyse produite par le contact de l'aluminium avec les vis de fixation si elles sont en acier (l'inox est recommandé).
- Le courant vagabond existant dans le terrain, évitable uniquement avec une mise à la terre correcte.
- La protection non rapide de l'aluminium en cas d'arrachement de la peinture par frottement ou coup.

## PA Productos poliamida / Produits en polyamide / Produits en polyamide

Una poliamida es un tipo de polímero que contiene enlaces de tipo amida. Las poliamidas se pueden encontrar en la naturaleza, como la lana o la seda, y también ser sintéticas, como el nylon o el Kevlar. La poliamida, de uso cada vez más frecuente en la industria, agrupa materiales como el Policarbonato, Polivinilo o el Nylon. Todos ellos con unas características comunes: su difícil destrucción y su larga duración. Considerado uno de los materiales más adecuado en productos expuestos a temperaturas extremas, a la humedad, al salitre del mar, a los rayos UV y a los fertilizantes químicos.

La composición de los materiales poliamida, son garantía de una larga duración, tanto en zonas secas como húmedas.

Su deterioro puede producirse por:

- Maltrato o fuerte impacto.
- Aproximación a espacios de alta temperatura.
- Contacto con productos químicos de mucha acidez.

A polyamide is a type of polymer that contains amide-type linkages. Polyamides can be found in nature, like wool or silk, and can also be synthetic, like nylon or Kevlar. Polyamide, increasingly used in industry, groups materials such as Polycarbonate, Polyvinyl or Nylon. All of them with some common characteristics: its difficult destruction and its long duration.

No se debe exceder la caída de tensión de 2V en el conductor entre la tira o tiras en el convertidor. La sección (S) en mm<sup>2</sup> del cable necesario viene determinado por la siguiente fórmula, siendo:

- r la resistividad (Cu = 0,017)
- L la longitud en metros de la línea
- I la intensidad en Amperios
- V la caída de tensión máxima admisible

Los convertidores deben contemplar las pérdidas en la distribución, es aconsejable sobredimensionar la potencia de éstos en un 20% para cubrir estas pérdidas.

The longest distance from the converter to the strips will be given by the section of the cable to be used. The 2V voltage drop in the conductor between the strip(s) and the converter should not be exceeded. The section (S) in mm<sup>2</sup> of the required cable is determined by the following formula, they are :

- r the resistivity (Cu = 0,017)
- L Line length in meters
- I Intensity in amps
- V the maximum allowable voltage drop

The converters must consider the losses in the distribution, it is advisable to oversize their power by 20% to cover these losses.

La distance maximale possible du convertisseur aux bandes sera donnée par la section du câble utilisé. La chute de tension de 2 V dans le conducteur entre la bande (s) du convertisseur ne doit pas être dépassée. La section (S) en mm<sup>2</sup> du câble nécessaire est déterminée par la formule suivante, étant donné :

- r résistivité (Cu = 0,017)
- L la longueur en mètres de la ligne
- I l'intensité en Ampères
- V la chute de tension maximale admissible

Les convertisseurs doivent tenir compte des pertes dans la distribution, il est conseillé de surdimensionner leur puissance de 20% pour couvrir ces pertes.

$$S = \frac{2rLI}{V}$$

# RECOMENDACIONES DE USO E INSTALACIÓN

## RECOMMENDATIONS FOR USE AND INSTALLATION

### RECOMMANDATIONS D'UTILISATION ET D'INSTALLATION

#### Empotrables de suelo y balizas / Floor recessed and bollards / Encastrés au sol et bornes

En el caso de instalaciones de luminarias empotradas, deberán siempre ser realizadas por personal cualificado, teniendo la máxima precaución y de acuerdo con las instrucciones de montaje adjuntadas con el producto y conforme a las normas de instalación electrónica de la normativa vigente.

Para tener en cuenta en este tipo de instalaciones:

- 1- Evite siempre colocar las luminarias en valdeadas o depresiones del terreno.
- 2- Es indispensable realizar un drenaje eficaz para todos los aparatos (arena de gravilla de 25 a 30 mm) con el objetivo de evitar el estancamiento de agua en el fondo del surco donde se instalan los aparatos. Un drenaje correcto debe permitir la absorción de 5 litros de agua en 8 minutos.
- 3- En lo referente a los aparatos encastrados en cemento u hormigón y habida cuenta de la tendencia de estos materiales a sufrir dilatación o compresión debido a los cambios de temperatura, es preciso prever un recubrimiento de dilatación y asegurarse de que el surco esté perfectamente nivelado con el pavimento.
- 4- La conexión entre los aparatos debe efectuarse mediante cable flexible tipo H05RN-F o H07RN-F con el fin de facilitar el mantenimiento de los aparatos y evitar los esfuerzos sobre los pasacables durante la instalación. Se han de respetar las instrucciones de instalación de cada producto, evitando la instalación de varios cables por una sola salida o la instalación con cables unipolares. Al igual que se recomienda la utilización de conectores estancos en instalaciones soterradas con el fin de evitar posibles daños por humedad.
- 5- Siga detenidamente las instrucciones de montaje durante la instalación y operaciones de mantenimiento.

Para una correcta conservación de las balizas/postes, le recomendamos su aplicación sobre una pilastra elevada, nunca a nivel del suelo, tierras o césped.

Los cambios de presión son causados por un cambio de las condiciones ambientales y dependiendo de la altitud donde estén instaladas.

Se pueden originar por una concentración de calor, producida cuando se enciende la luminaria y cuando se esta enfriando al apagarla o por un golpe térmico por lluvia, nieve o ciclos de lavado.

Para minimizar la posible condensación de vapor de agua dentro de los aparatos con un IP alto, debe hacerse funcionar la luminaria durante 1 hora sin el cristal de protección / carcasa, y transcurrido ese periodo de tiempo, cerrarlo inmediatamente.

Todas las valoraciones y decisiones técnicas deben ser tomadas por el responsable del departamento técnico, limitando los comentarios o propuestas realizadas por personas ajenas a dicho departamento.

In the case of recessed luminaire installations, they must always be set up by qualified personnel, taking the utmost caution and in accordance with the mounting instructions attached to the product and in accordance with the electronic installation standards of current regulations. Taking into account in this type of installations:

- 1- Always avoid placing the lights in valleys or depressions of the ground.
- 2- It is essential to carry out an efficient drainage for all the devices (25 to 30 mm gravel sand) in order to avoid water stagnation at the bottom of the furrow where the devices are installed. A correct drainage should allow the absorption of 5 liters of water in 8 minutes.
- 3- With regard to appliances embedded in cement or concrete and taking into account the tendency of these materials to undergo expansion or compression due to changes in temperature, it is necessary to provide an expansion coating and make sure that the groove is perfectly level with the pavement.
- 4- The connection between the devices must be made using a flexible cable type H05RN-F or H07RN-F in order to facilitate the maintenance of the devices and avoid stress on the cable glands during installation. The installation instructions for each product must be respected, avoiding the installation of several cables through a single outlet or the installation with single-pole cables. Likewise, the use of watertight connectors is recommended in underground installations in order to avoid possible damage due to humidity.
- 5- Follow the assembly instructions carefully during installation and maintenance operations.

For a correct conservation of the bollards / posts, we recommend their application on a raised pilaster, never at ground, or grass level. Pressure changes are caused by a change in environmental conditions and depending on the altitude where they are installed. They can be caused by a concentration of heat, produced when the luminaire is turned on and when it is cooling when it is turned off, or by a thermal shock due to rain, snow or washing cycles. To minimize the possible condensation of water vapor inside devices with a high IP, the luminaire must be operated for 1 hour without the protective glass / housing, and after that period of time, close it immediately. All evaluations and technical decisions must be made by the person in charge of the technical department, limiting the comments or proposals made by people outside of said department.

Dans le cas d'installations de luminaires encastrés, elles doivent toujours être effectuées par du personnel qualifié, avec la plus grande prudence et conformément aux instructions de montage jointes au produit et conformément aux normes d'installation électronique de la réglementation en vigueur.

A prendre en compte dans ce type d'installations :

- 1- Évitez toujours de placer les feux dans des vallées ou des dépressions du terrain.
- 2- Il est indispensable de réaliser un drainage efficace de tous les appareils (sable de gravier de 25 à 30 mm) afin d'éviter la stagnation de l'eau au fond du sillon où sont installés les appareils. Un drainage correct doit permettre l'absorption de 5 litres d'eau en 8 minutes.
- 3- En ce qui concerne les appareils noyés dans le ciment ou le béton et compte tenu de la tendance de ces matériaux à subir une dilatation ou une compression due aux changements de température, il est nécessaire de prévoir un revêtement de dilatation et de s'assurer que la rainure est parfaitement au niveau du chaussée.
- 4- La connexion entre les appareils doit être réalisée à l'aide d'un câble souple de type H05RN-F ou H07RN-F afin de faciliter la maintenance des appareils et d'éviter de solliciter les presse-étoupes lors de l'installation. Les instructions d'installation de chaque produit doivent être respectées, en évitant l'installation de plusieurs câbles via une seule prise ou l'installation avec des câbles unipolaires. De même, l'utilisation de connecteurs étanches est recommandée dans les installations souterraines afin d'éviter d'éventuels dommages dus à l'humidité.
- 5- Suivez attentivement les instructions de montage lors des opérations d'installation et de maintenance.

Por una buena conservación des balises/poteaux, nous recommandons leur application sur un pilastre surélevé, jamais au niveau du sol, de la terre ou de l'herbe. Les changements de pression sont causés par un changement des conditions environnementales et en fonction de l'altitude où ils sont installés. Ils peuvent être provoqués par une concentration de chaleur, produite lorsque le luminaire est allumé et lorsqu'il refroidit lorsqu'il est éteint, ou par un choc thermique dû à la pluie, la neige ou les cycles de lavage.

Pour minimiser l'éventuelle condensation de vapeur d'eau à l'intérieur des appareils à IP élevé, le luminaire doit être utilisé pendant 1 heure sans verre de protection / boîtier, et après cette période, le fermer immédiatement.

Toutes les évaluations et décisions techniques doivent être prises par le responsable du service technique, en limitant les commentaires ou propositions faits par des personnes extérieures à ce service.

- En el cambio de las lámparas y antes de cerrar las luminarias se debe limpiar las juntas para evitar que se depositen restos de tierra y/o hierba.
- When changing the lamps, the joints should be cleaned prior to closing the luminaire to avoid the accumulation of earth and/or grass.
- Pendant le changement des lampes et avant de fermer les luminaires, on doit bien nettoyer les jointes pour éviter des résidus de terre et/ou de gazon de s'y déposer.

- No instalar más de un cable por cada salida.
- Do not install more than one cable in each outlet.
- Ne pas installer plus d'un câble par sortie.

- Instalar sobre una pilastra a un nivel superior.
- Install on a plinth at a higher level.
- Installer sur un pilier à un niveau supérieur.
